

Wojciech Zieliński

Full Stack Developer

wojtekielinski96@gmail.com | +48 783 781 370 | github.com/wojtek960506

Summary

Adaptable Software Engineer with 5 years of experience in both backend (**Python**, **Node.js**, **MongoDB**) and frontend (**TypeScript**, **React**) development, working in international and cross-functional teams. Skilled in designing and implementing end-to-end solutions, including backend services, REST APIs and frontend interfaces. Quick to learn new technologies and take ownership of complex features. In my own projects passionate about creating full stack systems that help people organize their data.

Professional experience

Software engineer **Personal Project (Finance Tracker)** **10.2025 - present**

- Designing and implementing a personal finance tracking application for learning and private use
- Backend: **Node.js**, **Fastify**, **MongoDB** ; Frontend: **Next.js**, **React**, **TypeScript**, **Tailwind CSS**
- Developing module to parse and import legacy data using **Python**
- Continuously extending the application with new features to improve data analysis and usability

Career break **Travel & Technical Upskilling** **12.2024 - 09.2025**

- Undertook extended independent travel, managing planning, logistics and budgeting
- Studied and practiced **JavaScript**, **TypeScript**, **React**, **Node.js**, **Python** through tutorials
- Implemented small applications and code experiments to reinforce and refresh core concepts and tooling

Senior Software Engineer **MicroStrategy** **02.2023 - 11.2024**

- Served as a lead frontend developer (**TypeScript**, **React**) responsible for designing and maintaining tools used to create, edit and execute Python automation scripts
- Built complex frontend features in **TypeScript** and **React**, consuming and integrating with internal **REST API endpoints** supporting automation and enterprise workflows, with unit-tested components (using **Jest** and **React Testing Library**)
- Collaborated with other teams to improve code base and discuss enhancements
- Delivered **knowledge-sharing** sessions across the team and company on systems I contributed to
- Produced robust automated tests (using **Gherkin** and **Python**) ensuring long-term reliability, maintainability and consistent API integration

Software Engineer **MicroStrategy** **05.2021 - 01.2023**

- Transitioned from backend Python engineer to **frontend development with TypeScript and React**, building UI tools supporting Python automation workflows
- Integrated data from internal REST APIs into frontend components
- Developed and maintained utilities and UIs used across the **mstrio-py** automation ecosystem
- Prepared **Python example** scripts for clients, demonstrating API usage and best practices
- Improved quality in multiple repositories by fixing bugs, expanding automated and unit test coverage

Associate Software Engineer **MicroStrategy** **02.2020 - 04.2021**

- Contributed to MicroStrategy's official **Python automation library** (published as **mstrio-py**), enabling modern interactions with enterprise REST APIs and enhance its documentation
- Onboarded new team members by explaining development workflows, project architecture and tools used by the team
- Wrote automated tests in a frontend repository, validating UI components interacting with API endpoints
- Collaborated closely with backend and platform teams to improve API usage and integration reliability

Software Engineer **Innsoft** **08.2019 - 12.2019**

- Developed backend components for the energy sector using **Java** and relational databases
- Collaborated within a small engineering team, strengthening communication and teamwork skills

Education

Bachelor of Engineering, Computer Science | Warsaw University of Technology | 2016-2020

- Algorithms and Data Structures, Information Systems Engineering, Database Systems
- 2 semesters at Czech Technical University in Prague within educational program Erasmus+
- Thesis: "**Design and implementation of client-server system to save and analyze workouts with client side as mobile application**" - aim was to create full system with communication between backend and frontend

Skills

JavaScript | React | TypeScript | Next.js | Node.js | CSS | HTML | Tailwind | Jest | React Testing Library | MongoDB | Python | English B2 | strong teamwork collaboration | good communication | ability to learn new technologies quickly

Interests

Mountain hiking | climbing | cycling and bikepacking | motorcycle riding | music and playing piano | football | Formula 1 | MotoGP | learning foreign languages
